

## Areas that have to change with COVID 19 pandemic

COVID-19, has become a pandemic affecting millions of people around the world. Countries including Sri Lanka, have shut their borders and imposed isolation measures to control the virus outbreak. Government asked the people to stay at home. COVID-19 is changing the way people work, live and interact with one another. So, we have to change some areas of our business during this COVID 19 pandemic.

- Online veterinary helps.  
As people have to stay at home they cannot go out. So, if their dog gets sick during these days pet owners have to face a big trouble. So, in our application we can add a feature to connect a veterinary doctor to the pet owner through an online platform as a live video call. Then the doctor will be able to decide what medicines should be given to the dog. Then we can also connect a pharmacy in that area also through this online platform that the pharmacy can deliver the recommended medicine to the door step of the pet owner.
- Due to COVID 19 people can not do their shopping as they did before. The pet owners cannot buy dog food from super markets for their pets. So, we can add another feature to our application that the customer can order the food items through our pet shop that their pet need and we can deliver those food items to the customer's door step.
- If someone who has a dog have to go for a quarantine centre, sometimes there will be no one to look after their pet. In that case, we can take care of their pet dog for him.
- Dog lovers love to have printed dog pictures on their Mobile back covers, Hand bags, Books, Clothes etc. Today using face masks is compulsory for all people so, we can sell face masks with dog printed pictures through our online pet shop.
